the transaction function device is operative responsive to receipt of at least one

HTML format document by the browser, to cause the ATM to carry out a

transaction function.

9.   A method comprising the steps of:

a)   operating a browser in at least one computer in connection with an

automated banking machine;

b)   receiving at least one HTML format document with the browser, wherein

the HTML format document includes at least one transaction instruction;

c)   carrying out at least one transaction function with a transaction function

device in the automated banking machine responsive to receipt by the

browser of the HTML format document including the transaction

instruction.

10.   The method according to claim 9 wherein the automated banking machine

includes an output device in operative connection with the computer, and further comprising the

step of:

d)   producing an output through the output device responsive to the receipt of

the HTML format document by the browser.
